Hose / product no. EK20-1598

Hose clamp DN 25 for 22/35 mm mixer / product no. EK20-0781

Issue

Mixed material flows from the mixing head into the application hose. Depending on the length of the hose or due to a high flow rate, there is a risk that the material will be separated again.

Solution

Our Hose Mixer ensures a static re-mixing directly in the hose. The Material will be mixed and homogenised again, shortly before the output.
